GitHub: <https://github.com/Dipraise1>

Profile

Creative and driven Web3 developer with 3+ years' experience in freelance development, paired with hands-on projects in blockchain, DeFi, NFT, and smart contract systems. Strong track record of building both backend and frontend components, integrating decentralized technologies, and deploying applications used in production. Currently focused on delivering solutions that combine performance, scalability, and modern design.

Experience

Freelance Developer

Self-Employed — 2022 to Present

- Developed a wide variety of projects: wallet and token utilities, smart contracts, DeFi/NFT applications, dApps, Telegram bots, and UI frontends.
- Built and maintained many public repositories on GitHub covering Web3 tech: TypeScript/JavaScript front-ends, Solidity and Rust smart contracts, backends, etc.
- Produced portfolio projects such as “sawawalletweb”, “multisigcontract”, “MEMEBLOCKCHAIN”, “prismabanksystem”, “copytrade”, among others.
- Delivered responsive websites and front-end experiences with modern tools/JS frameworks, ensuring client requirements in usability and visual design are met.

Web/DevOps Role – Ricks Servers, Kubwa

3-month contract – 2023

- Managed server provisioning, deployment, and maintenance for client websites and XAMPP, LAMP stack for clients
 -
 - Ensured stable uptime, performed monitoring and optimization of backend infrastructure.
 - Assisted in deploying and configuring environments for blockchain-enabled apps, supporting continuous integration and version control.
-

Projects & Highlights

- **Portfolio Website:** Deesporfolio – clean UX/UI showcasing selected works, Web3 projects & GitHub repos.
 - **Multi-signature Contract (“multisigcontract”):** Smart contract work in Solidity/Rust for secure transfer or operations requiring multiple approvals.
 - **MEMEBLOCKCHAIN:** On-chain or blockchain side project involving memecoins / token systems.
 - **PrismaBankSystem:** Building financial-backend style systems with JS/TS and Web3 integrations.
 - **SawawalletWeb:** A wallet-related front-end or service project (“sawa wallet”).
-

Skills & Tools

- **Languages & Technologies:** JavaScript, TypeScript, Solidity, Rust (basic), front-end frameworks/tools, REST APIs.
 - **Blockchain / Web3:** Smart contracts (Solidity/Rust), DeFi/NFT, wallet integrations, decentralised systems.
 - **Frontend & UI/UX:** Clean design, responsive layouts, modern JS frameworks, interactive components.
 - **DevOps / Deployment:** Server setup and maintenance, environment provisioning, deployment pipelines, uptime monitoring, version control (Git).
 - **Soft Skills:** Freelance collaboration with clients, problem-solving, attention to detail, delivering to specification under deadlines.
-

Education

- In progress: Bachelor’s in Computer Science, University of Abuja
Relevant coursework: Programming, Data Structures, Algorithms, Web Development, Computer Networks, maths
