

Divine Rapheal

WEB3 DEVELOPER · BLOCKCHAIN ENGINEER · FULL-STACK BUILDER

raphealdivine2@gmail.com · github.com/Dipraise1 · t.me/jokersrequired ·
divinebuilds.online · @divinecodes11

PROFESSIONAL SUMMARY

Self-driven Web3 engineer with 4+ years of hands-on experience shipping production-grade decentralized applications across DeFi, NFT, AI, and mobile. Fluent in Solidity, Rust, TypeScript, and Python. Built and deployed 20+ projects — from a multi-chain USDC remittance wallet (Sawa) to a decentralized vector database on Bittensor (Engram), automated trading bots with Jito MEV protection, and real-time on-chain analytics platforms. Comfortable leading full-stack architecture, writing battle-tested smart contracts, and shipping polished user interfaces.

EXPERIENCE

Founder & Lead Developer

2024 – Present · Remote

[Sawa Wallet](#)

Building Sawa Wallet — send USDC with just a phone number, no wallet address required. Non-custodial, multi-chain (Solana, Polygon, Base), designed for remittances across 50+ countries.

- › Architected multi-chain USDC settlement layer across Solana, Polygon, and Base
- › Built phone-number-to-wallet resolution system removing address complexity for end users
- › Developed cross-platform mobile app with Expo, TypeScript, and React Native
- › Designed non-custodial key management flow ensuring user funds remain self-sovereign
- › Deployed production backend with real-time transaction status and push notifications

Senior Web3 Developer

2022 – Present · Remote

[Freelance – Independent Consultant](#)

End-to-end development of decentralized applications, smart contracts, trading bots, and blockchain infrastructure for clients across DeFi, NFT, AI, and fintech sectors globally.

- › Built Engram — decentralized vector database on Bittensor with HMAC challenge-response proofs and TAO incentive layer for miners
- › Developed Multichain Trading Bot in Rust/TypeScript (Axum backend, Grammy Telegram interface) with Jito bundle support, auto TP/SL, GoPlus safety checks, and DexScreener price feeds across Solana, Ethereum, and BSC
- › Shipped CabalSpy — real-time on-chain token tracking platform with Turnkey wallet auth and live EVM chain monitoring (Next.js + TypeScript)
- › Created PumpFun Deployer Bot with Jito MEV protection for frontrun-resistant token launches on Solana
- › Delivered OTTO+ Rewards — gamified Solana token account cleanup dApp with achievements, real-time stats, and SOL reward distribution
- › Built The Basement yield aggregator on Meteora with auto-compounding across liquidity pools
- › Deployed production Crypto Escrow DApp supporting both Ethereum and Solana with multi-party security (TypeScript 48.9%, Rust 27.3%, Solidity 15.1%)
- › 15+ smart contracts audited and deployed with \$2M+ combined TVL across DeFi protocols

Senior App Developer

Apeit.com (Apeit Wallet)

Core developer on the Apeit Wallet product — contributed across mobile frontend, backend APIs, and blockchain integration from early architecture through to production launch.

- › Developed key wallet features across React Native mobile and React web clients
- › Integrated blockchain transaction layers and wallet connection flows
- › Built scalable backend services handling real-time transaction data for 500+ users
- › Optimized app performance reducing load times by 50% through code splitting and caching
- › Collaborated cross-functionally on product roadmap, design, and QA processes

NOTABLE PROJECTS

Sawa Wallet

Multi-chain USDC remittance wallet. Send crypto with a phone number — no addresses. Solana, Polygon, Base.

Expo React Native TypeScript Multi-chain

USDC

sawawallet.org

Engram

Decentralized vector DB on Bittensor. Content-addressed semantic memory for AI with TAO incentive layer.

Python Bittensor AI Vector DB IPFS

theengram.space

Multichain Trading Bot

Rust/Axum bot with Telegram UI, Jito bundles, auto TP/SL, GoPlus checks, and multi-chain support.

Rust TypeScript Solana EVM Jito

t.me/multichaintradingbot

Crypto Escrow DApp

Decentralized escrow supporting Ethereum and Solana. Multi-party security, wallet integration.

Solidity Rust TypeScript Next.js

escrowdapp-cyan.vercel.app

CabalSpy

Real-time token tracking platform with Turnkey wallet auth and live EVM on-chain monitoring.

Next.js TypeScript Turnkey Real-time

FX AI Agent

ML-powered forex trading agent. Real-time market analysis, signal generation, WebSocket feeds.

Python TensorFlow ML WebSocket

TECHNICAL SKILLS

BLOCKCHAIN	Solidity Rust Ethereum Solana Polygon Base BSC Web3.js Ethers.js
	Anchor Metaplex Jito
FRONTEND	React Next.js TypeScript Tailwind CSS Framer Motion Vite
MOBILE	React Native Expo Flutter
BACKEND	Node.js Rust/Axum Python PostgreSQL MongoDB Redis
AI / ML	TensorFlow Bittensor Vector DBs LLM Integration AI Agents
TOOLS	Git Docker AWS Vercel Hardhat Truffle Foundry IPFS
PROTOCOLS	DeFi NFT Standards ERC-20/721/1155 SPL Tokens Cross-chain Bridges MEV

EDUCATION

BSc Software Engineering

Miva Open University · 2025 – Present

Software Engineering with focus on modern development practices, distributed systems, and scalable architecture.

BSc Computer Science

University of Abuja · 2024 – Present

Computer Science foundations — computational theory, algorithms, data structures, and system design.

Self-Taught Developer

Online Platforms & Bootcamps (Udemy, freeCodeCamp, BuildSpace) · 2020 – 2022

Intensive self-directed learning in blockchain development, Solidity, React, and Web3 tooling.

KEY ACHIEVEMENTS

- › 20+ production-grade DApps built and deployed
- › Founder of Sawa Wallet — serving 50+ countries
- › 50+ client projects delivered across 6 countries
- › Open-source contributor across blockchain tooling repos
- › 15+ smart contracts with \$2M+ combined TVL
- › Engram: decentralized AI memory on Bittensor mainnet
- › Multi-chain expertise: Solana, Ethereum, Polygon, Base, BSC
- › Production bots processing live trading volume on Solana & EVM
